

Anti-stigmatizing, client-centered sexual history
as an effective implementation strategy to
increase EHE intervention delivery in diverse clinical settings

DRAFT

Many patients remain sub-optimally engaged in evidence-based HIV prevention interventions

TRENDS IN PREP PRESCRIPTIONS AMONG PEOPLE WHO COULD BENEFIT, BY SEX AT BIRTH, 2019-2022*

TRENDS IN PREP PRESCRIPTIONS AMONG PEOPLE WHO COULD BENEFIT, BY RACE/ETHNICITY, 2019-2022*

*Data are preliminary. The data on PrEP prescriptions by race and ethnicity are limited, and findings are estimated. Source: Centers for Disease Control and Prevention.

Lack of opportunity is often a key barrier,
as many patients who might benefit from these interventions...

...are not aware of them,
are not offered them,
or cannot access them.

The **sexual history** is a critical implementation strategy for increasing access to and uptake of HIV prevention interventions

Patients *want* sexual health conversations...

85%

of patients report wanting to talk about sexual health concerns with their providers

71%

Say that primary care providers should ask all patients if they have sexual health concerns

68%

of patients report fear of embarrassing their provider as a reason for not broaching sexuality

Zhang, X., Sherman, L., & Foster, M. (2020). Patients' and providers' perspectives on sexual health discussion in the United States: A scoping review. *Patient Education and Counseling*, 103(11), 2205-2213.

The **GOALS Approach to Sexual Health** is a **provider-level implementation strategy** designed to promote adoption and sustainment of EHE evidence-based intervention (EBIs) by changing patient-provider sexual history interactions and sexual health conversations.

The **GOALS** Approach has four core components

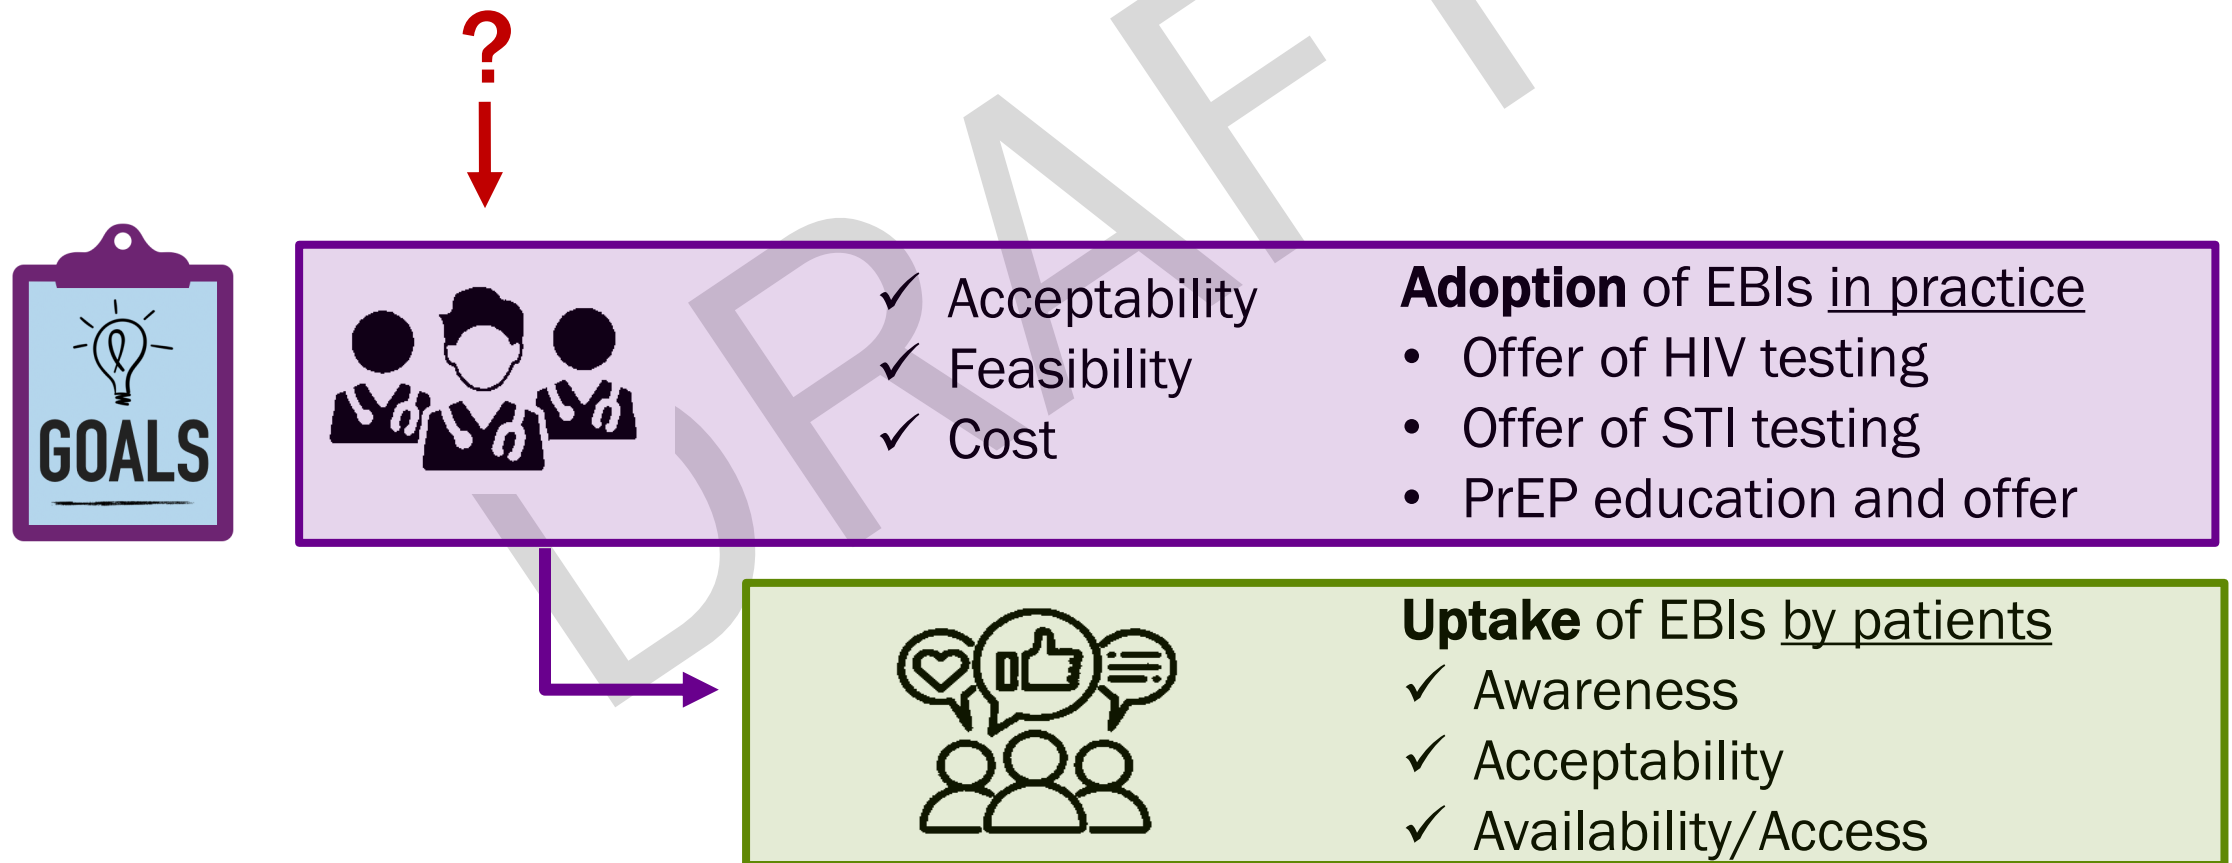

1. Initiating sexual health conversations with open-ended, **client-centered** questions;
2. Providing universal, opt-out, **HIV and STI testing**;
3. Offering universal, rather than risk-based, **PrEP education and access**;
4. Using gender-affirming, non-discriminating, anti-stigmatizing and trauma-informed **language** in all HIV prevention conversations with clients/patients.

GOALS increases EBI adoption and sustainment by normalizing HIV as a part of overall sexual health, decreasing stigma, and removing risk-based protocols that limit access.

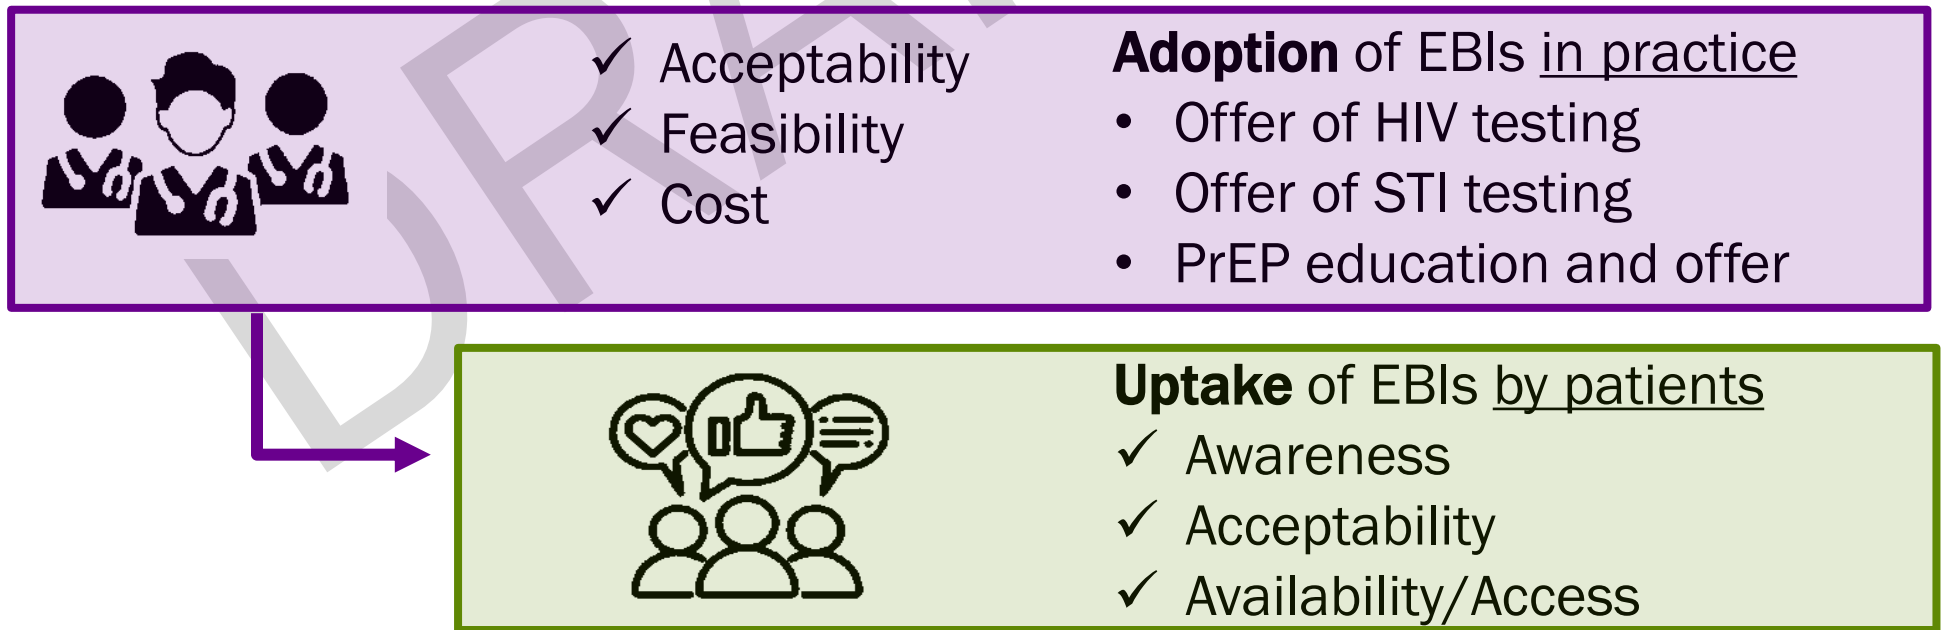

Implementation strategies are methods or techniques used to enhance the **adoption, implementation, and sustainability** of evidence-based interventions in practice.

NYC HD developed a multi-layer implementation strategy to adopt GOALS in agencies funded for HIV prevention.

**Infrastructure
Development**

**Training
Requirements**

**Service delivery
Mandates**

- ✓ Acceptability
- ✓ Feasibility
- ✓ Cost

Adoption of EBIs in practice

- Offer of HIV testing
- Offer of STI testing
- PrEP education and offer

Uptake of EBIs by patients

- ✓ Awareness
- ✓ Acceptability
- ✓ Availability/Access

**Infrastructure
Development**

**Training
Requirements**

**Service delivery
Mandates**

- ✓ Acceptability
- ✓ Feasibility
- ✓ Cost

- GOALS in program
- Integration into protocols
- Training part of HR
- Documentation in EMR

- Acceptability
- Feasibility
- Cost

- **Adoption** of EBIs in practice
- Offer of HIV testing
- Offer of STI testing
- PrEP education and offer

- **Uptake** of EBIs by patients
- ✓ Awareness
- ✓ Acceptability
- ✓ Availability/Access

Will this work?

Partnership to increase **Access, Client-Centered Care, and Equity in HIV Services** | U01PS005239, Golub, PI (2021-2026)

- **CDC-funded cooperative agreement** funded under an initiative to accelerate the impact of Health Department delivered HIV prevention activities (RFA-PS-21-002)
- **Community-academic partnership** between the NYC Department of Health and Mental Hygiene (NYC DOHMH) and the Hunter Alliance for Research & Translation (HART) at Hunter College of the City University of New York
- **Mixed-methods, longitudinal study** designed to: a) operationalize and **examine enactment** of the NYC HD implementation strategy; b) **evaluate** the strategy's **impact** on implementation outcomes and patient outcomes; and c) apply the CFIR to examine the role of **socio-ecological and contextual influences** on the strategy's implementation and effectiveness.

5 minute Research Questions

- Did NYC HD training requirements lead to actual staff training in GOALS?
- Did NYCHD service delivery mandates lead to GOALS adoption?
- Was utilization of the GOALS implementation strategy associated with increased provider adoption of HIV prevention interventions?

DRAFT

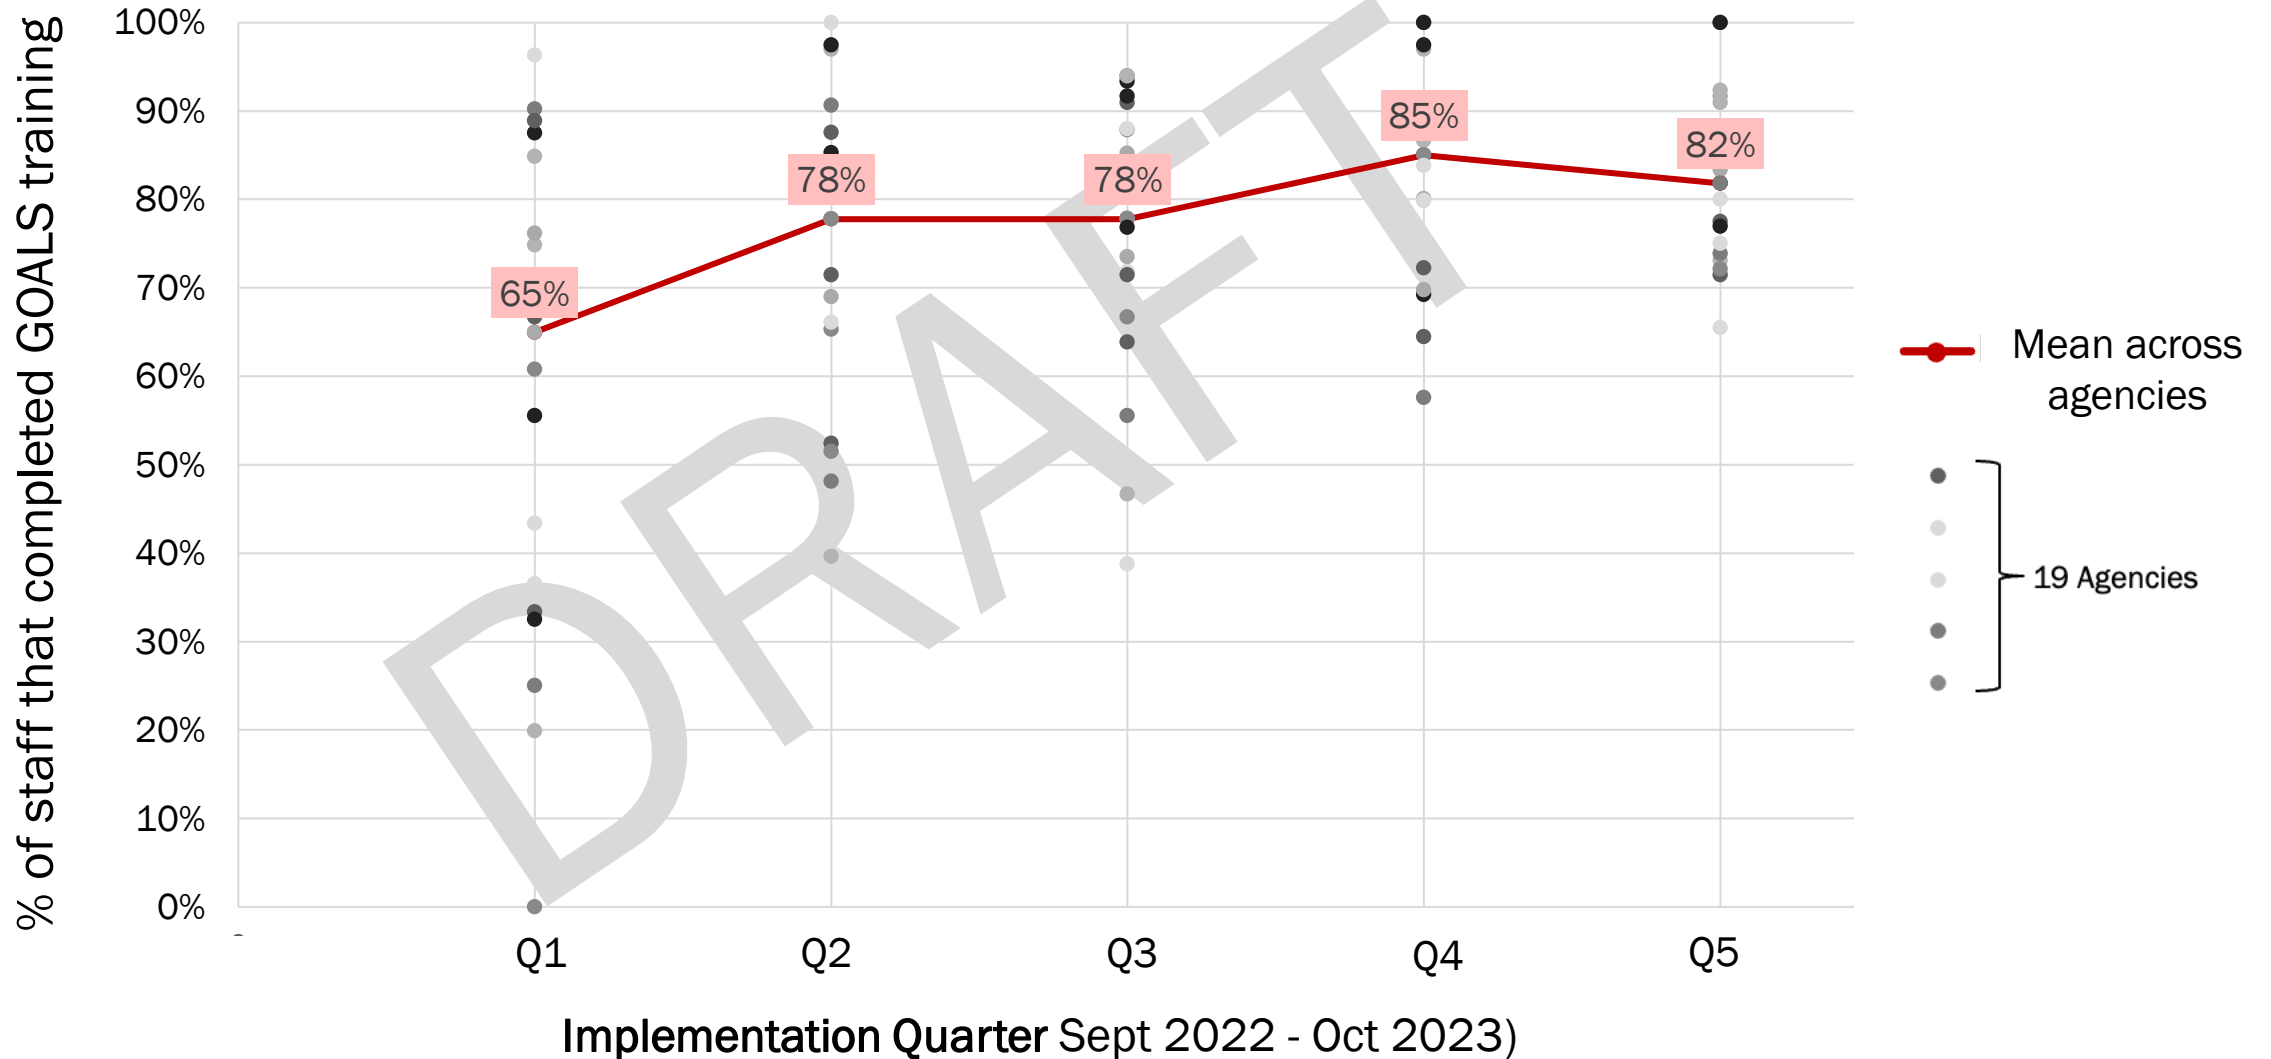

Project PACE Methods

- **Document review and content analysis** of all implementation activities (e.g., coding of 676 technical assistance calls with 19 agencies);
- **Observational analysis** (e.g., attendance at learning collaborative sessions; site visits to funded agencies);
- **Qualitative interviews** with staff and leadership at both funded agencies and the NYC HD (n = 64; 16/19 agencies);
- **Quantitative analysis of outcome and indicator data** (including monthly agency reporting on training requirements/service mandates and client/staff experience surveys).

RQ#1: Staff Trained in GOALS over Time

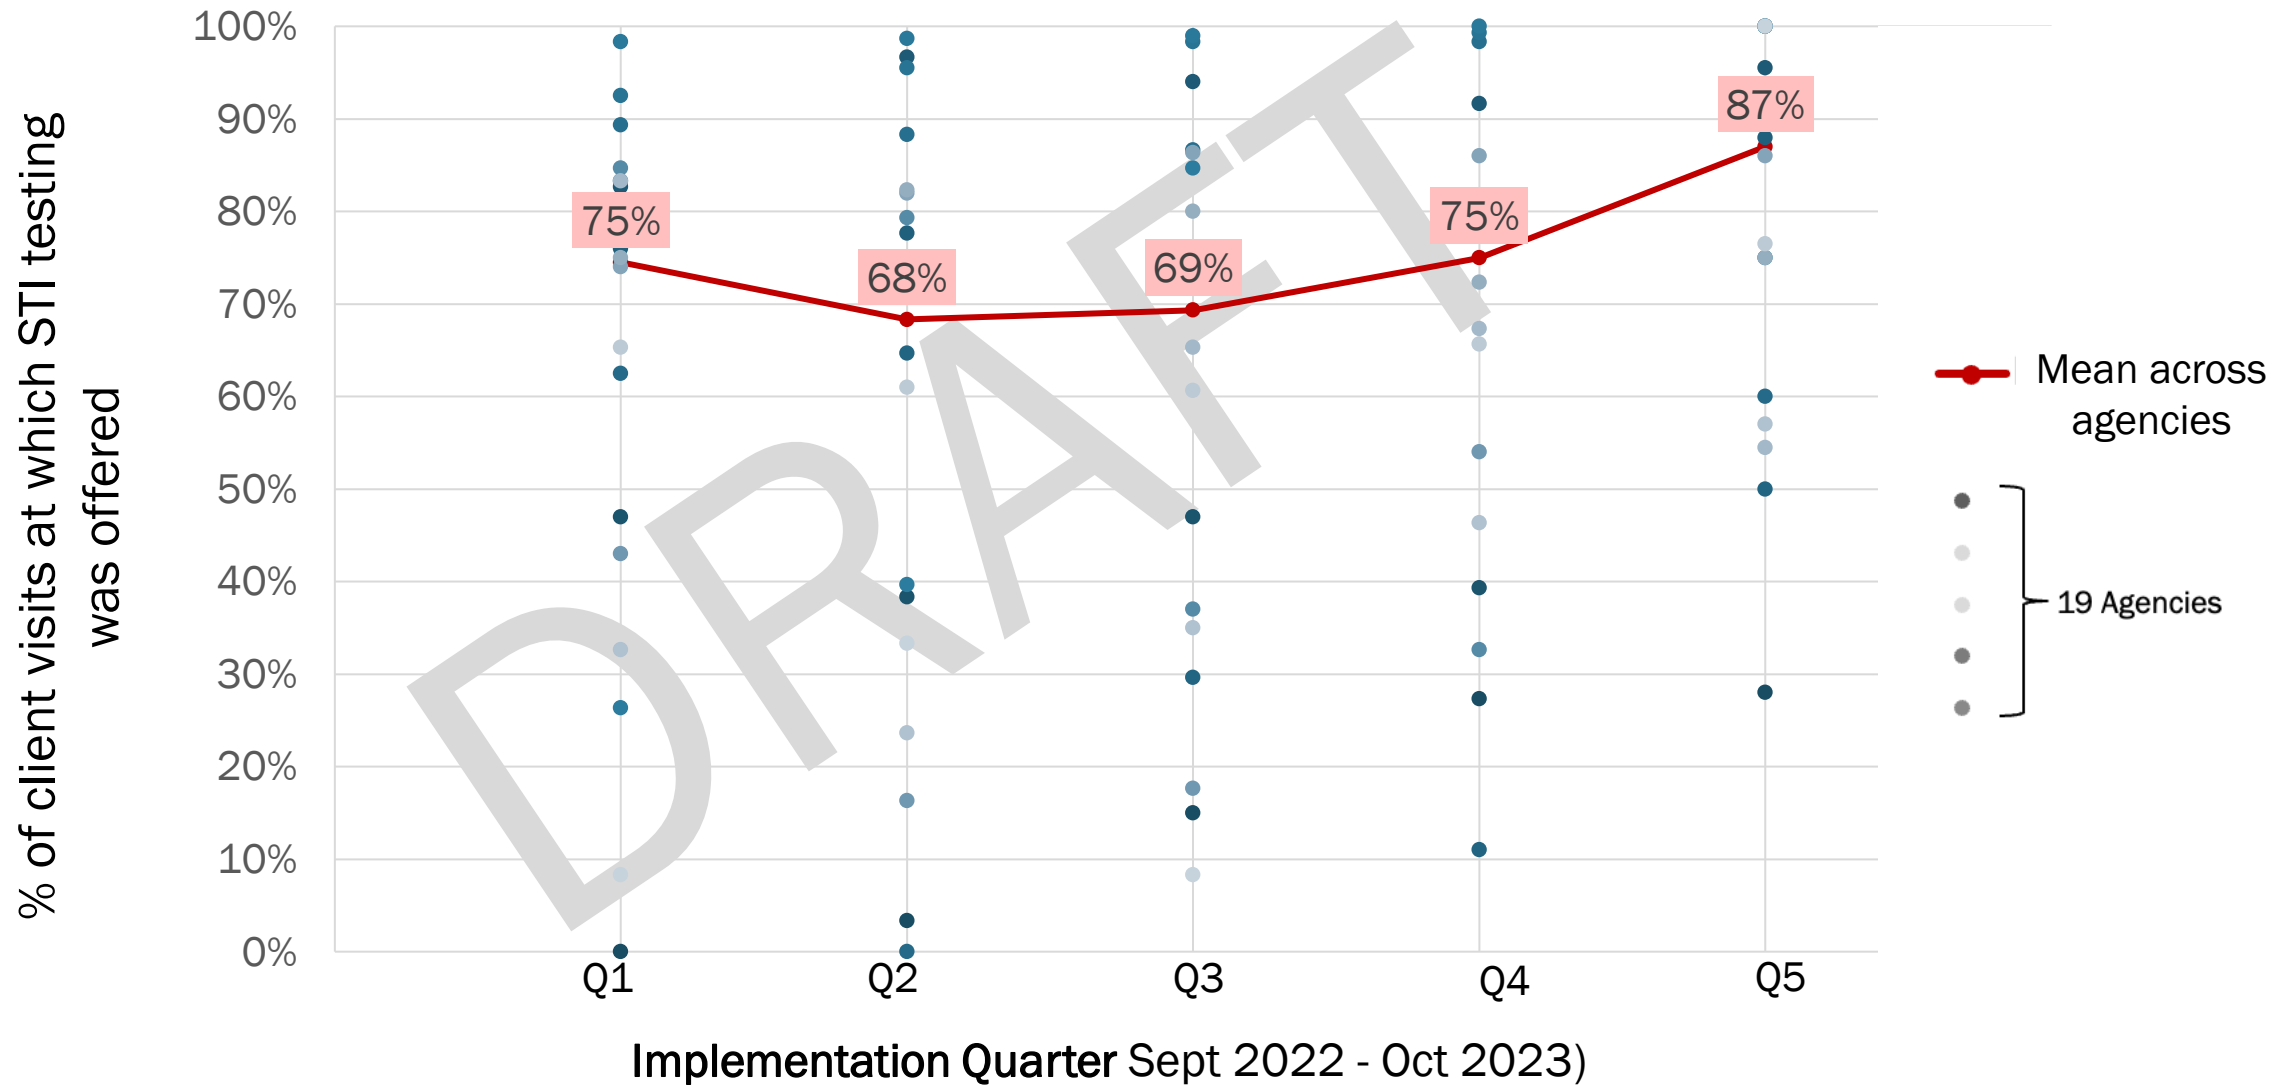

RQ #2: GOALS Adoption over Time

RQ#3: Adoption of EBIs | Offers of HIV Testing

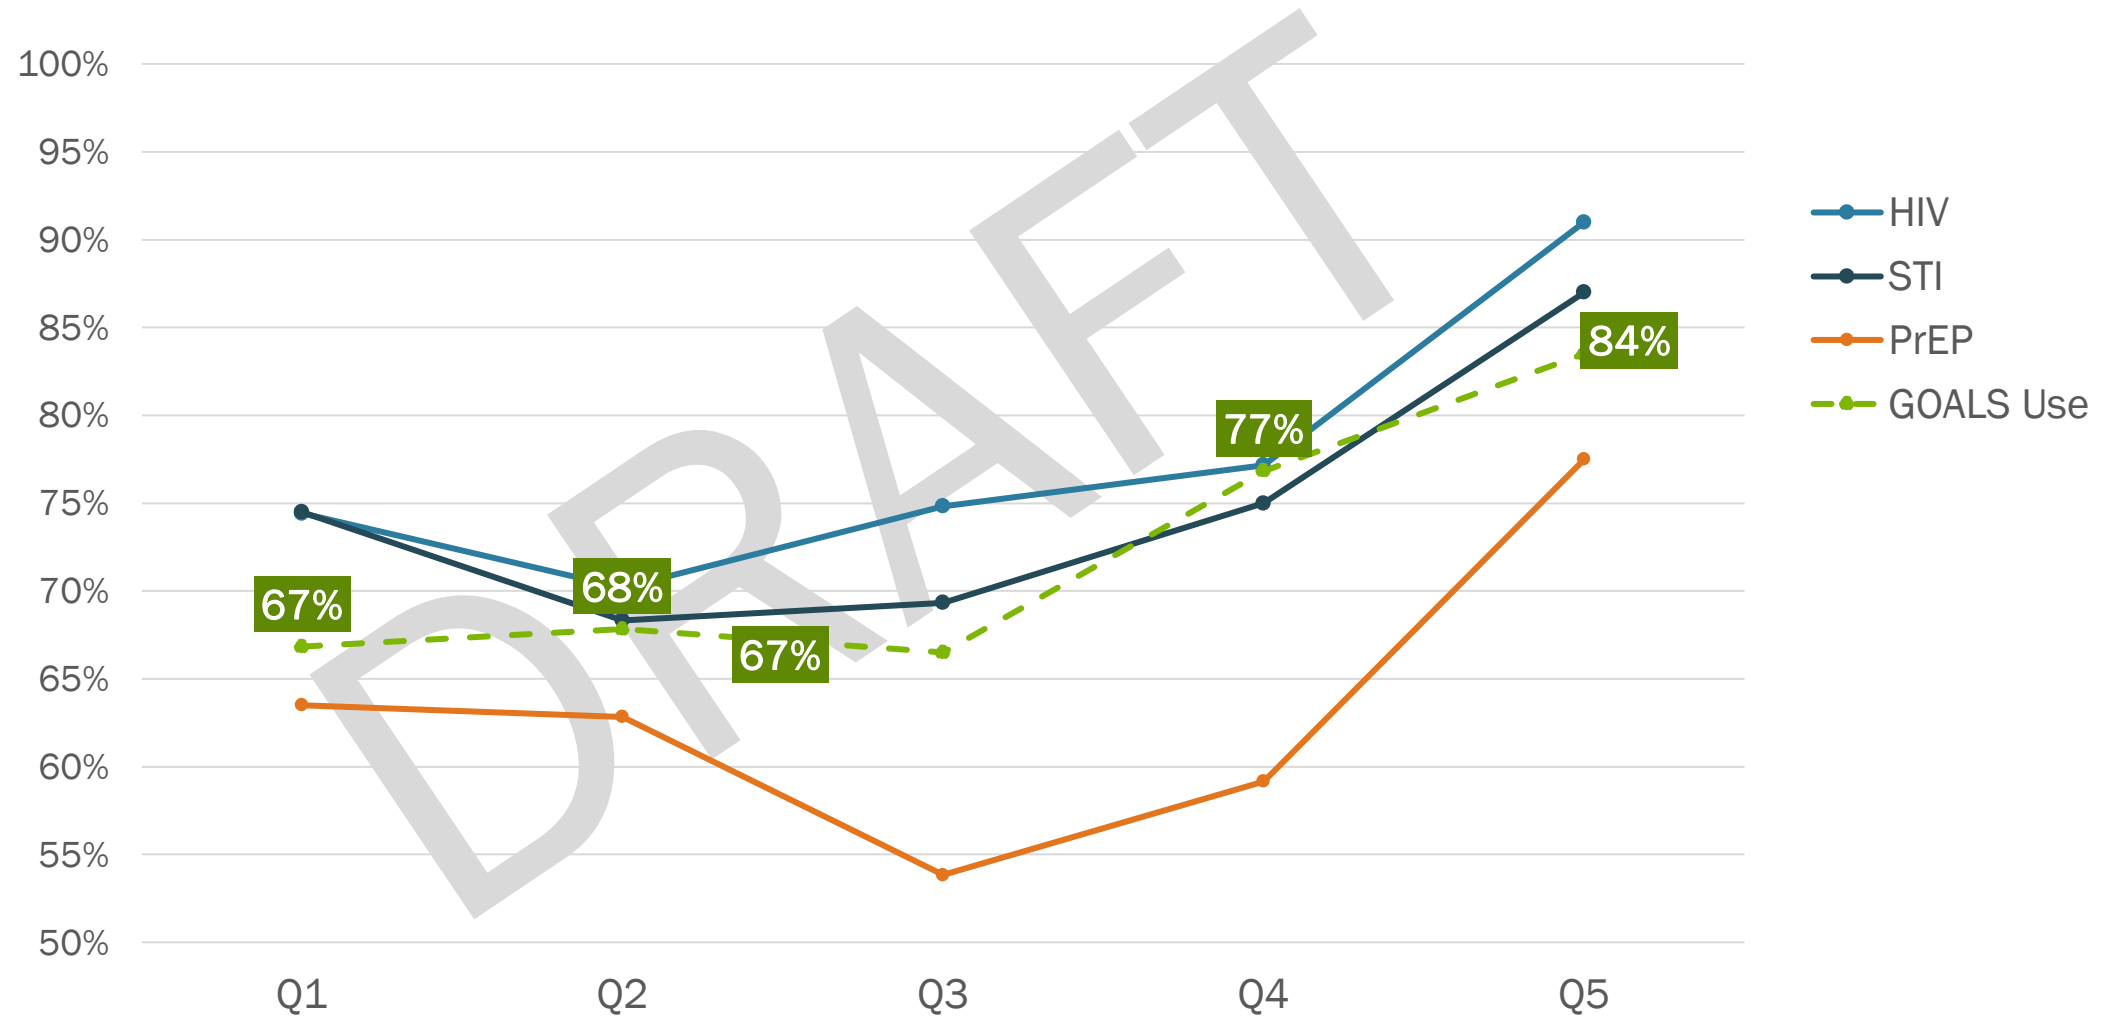

RQ#3: Adoption of EBIs | Offers of STI Testing

RQ#3: Adoption of EBIs | PrEP Education/Offer

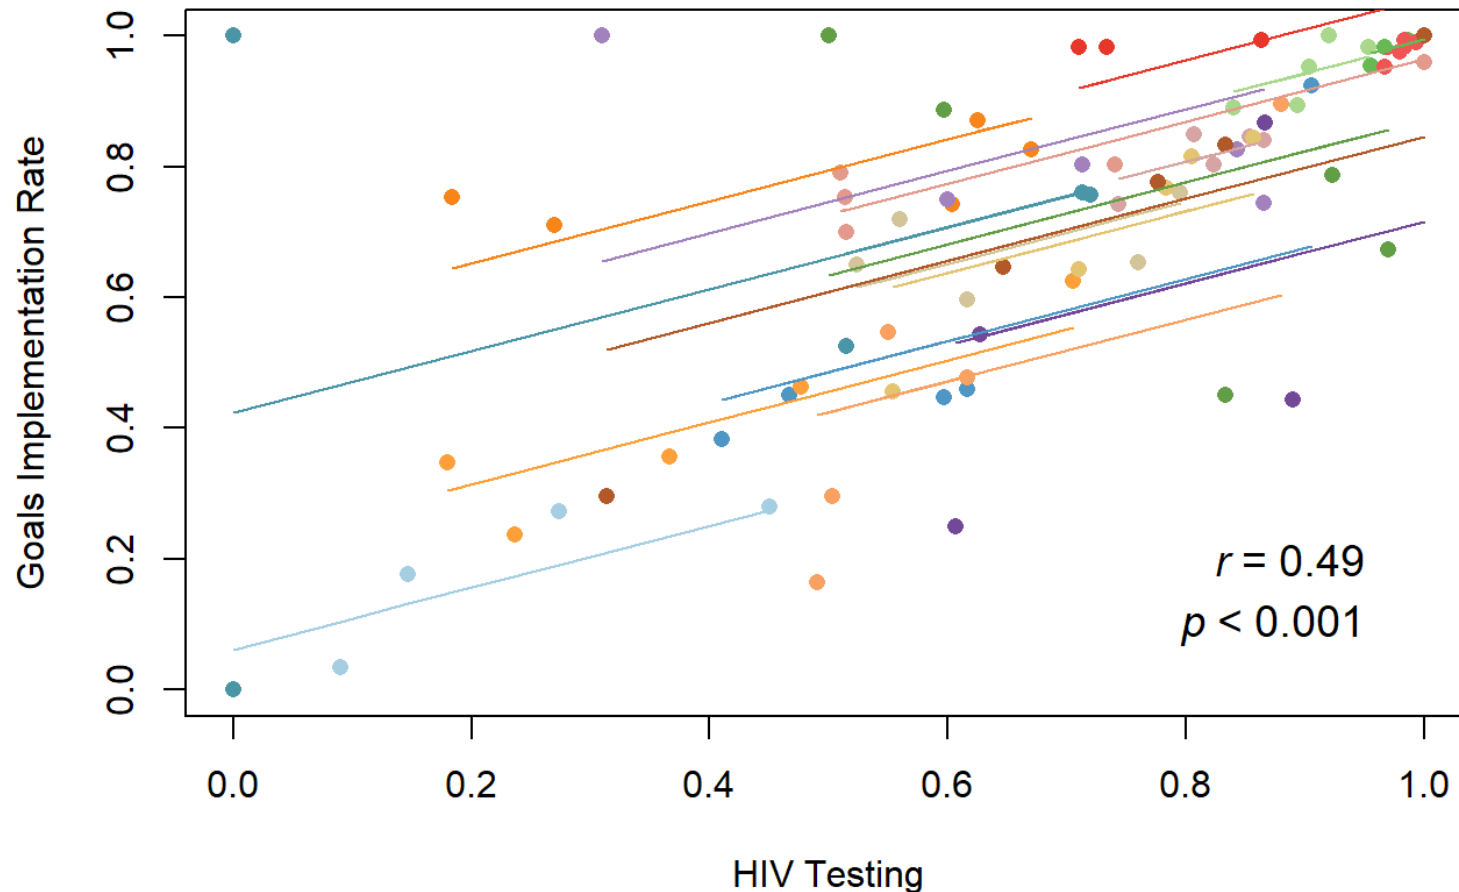

RQ#3: Association between GOALS and EBI Adoption

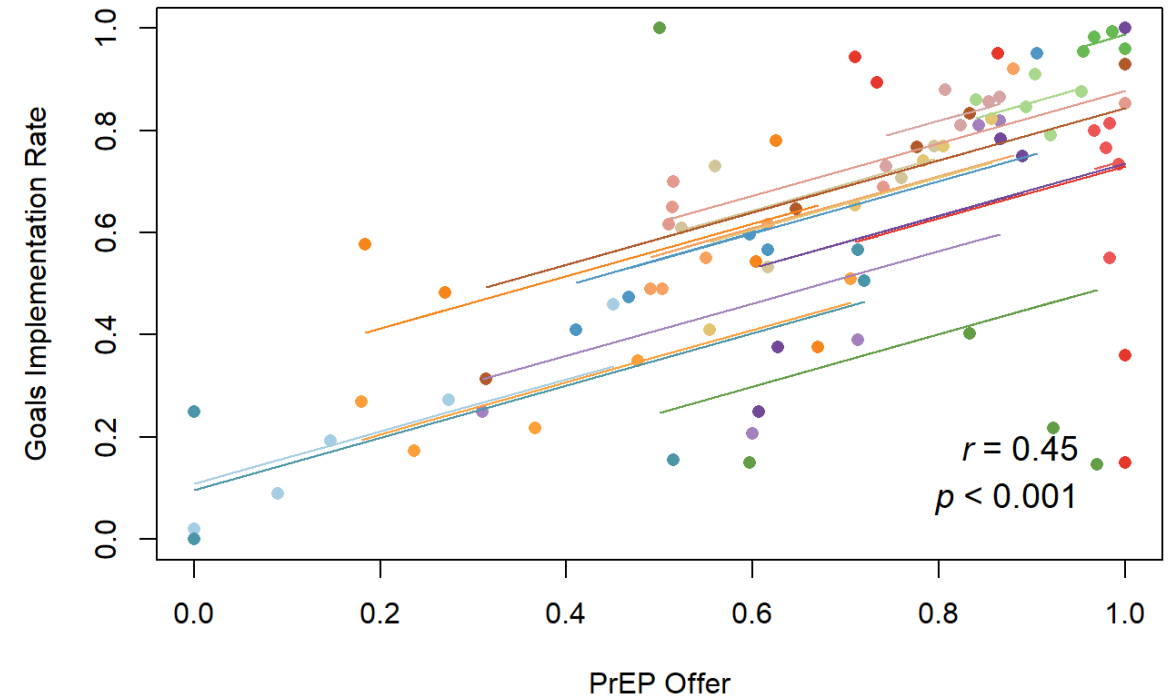

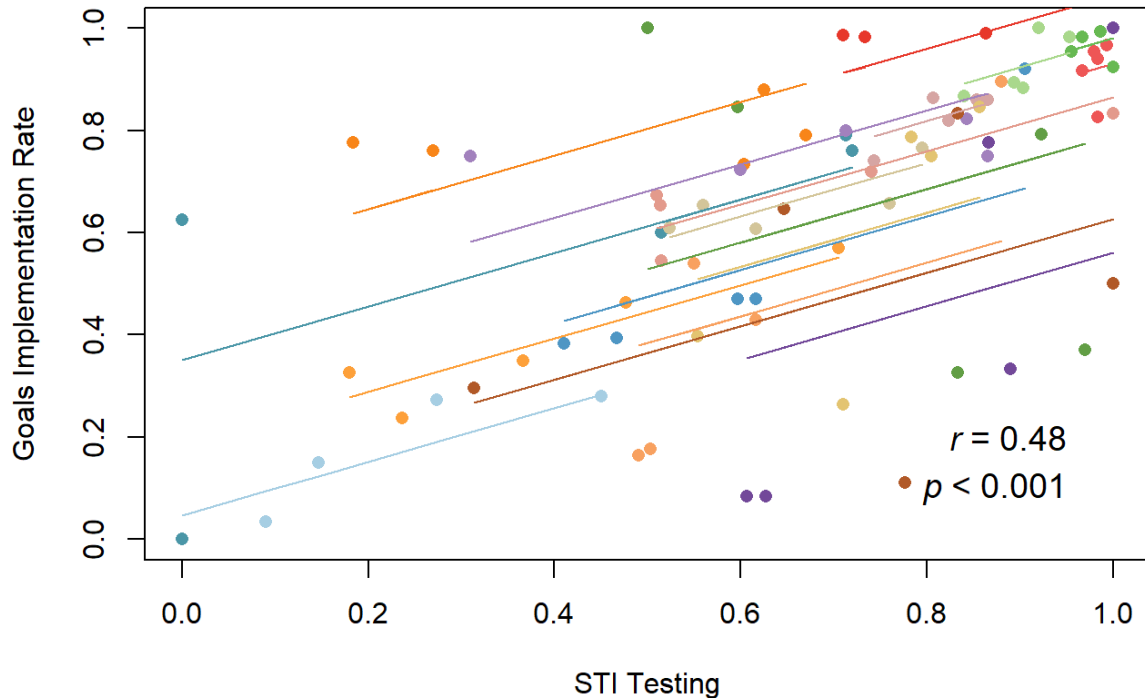

RQ#3: Association between GOALS and EBI Adoption

Repeated Measures Correlation Analysis (18 agencies; 5 time-points)

RQ#3: Association between GOALS and EBI Adoption

Repeated Measures Correlation Analysis (18 agencies; 5 time-points)

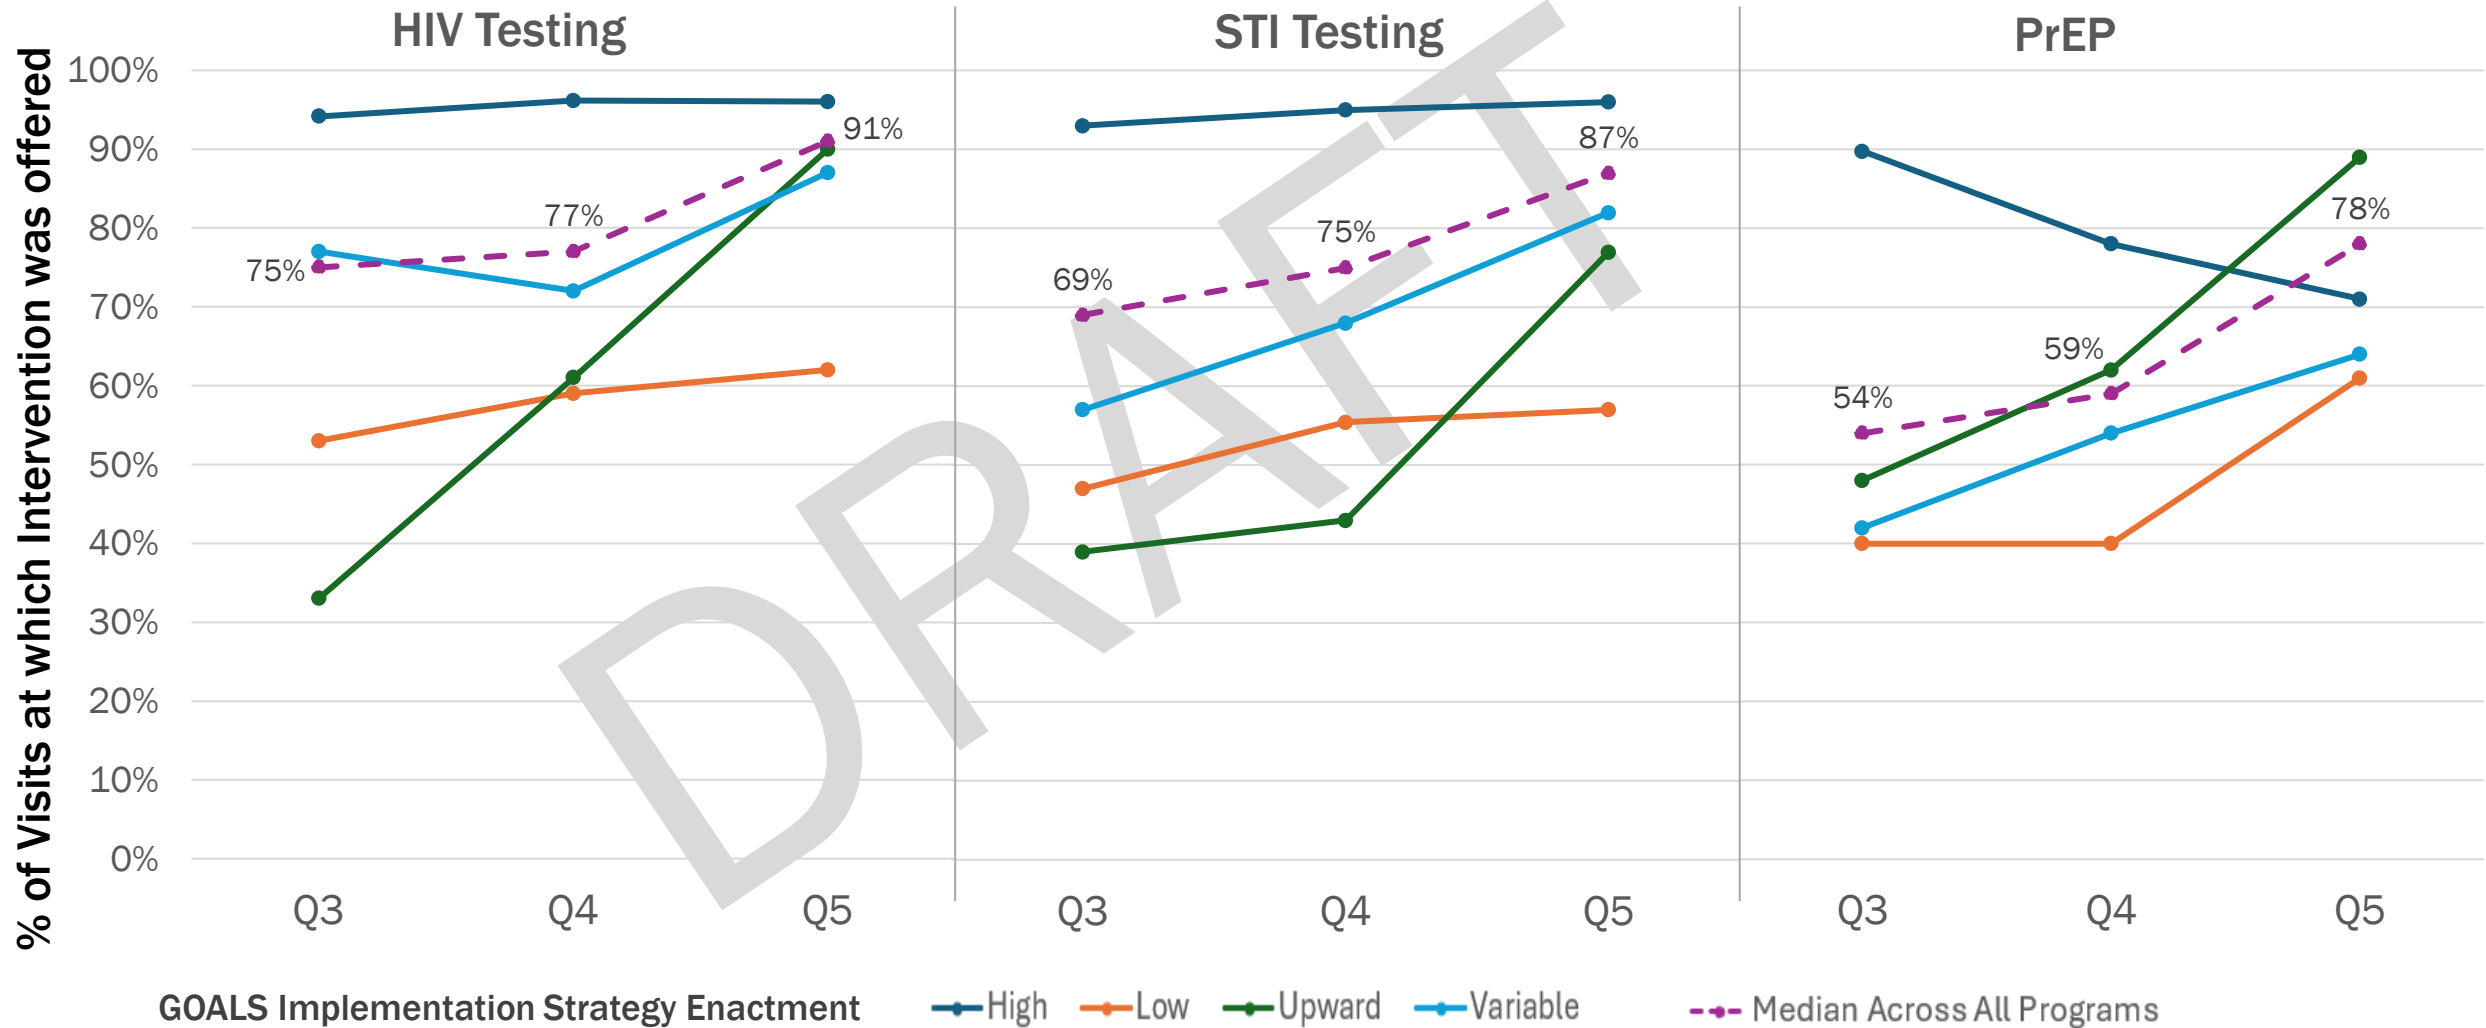

RQ#3: Association between GOALS and EBI Adoption

Agencies were classified into groups based on GOALS enactment patterns...

- **HIGH implementers**: rate of the GOALS implementation above the median for all three quarters (n = 6)
- **LOW implementers**: rate of GOALS use at or below the median for all three quarters (n = 5)
- **UPWARD implementers**: rate of GOALS use started at or below the median in Q3 but increased to above the median by Q5 (n = 4)
- **VARIABLE Implementers**: rate of GOALS use above the median in some quarters and at or below the median in others (n = 3)

RQ#3: Association between GOALS and EBI Adoption

Summary

- Health department training and service delivery mandates were associated with adoption of a provider-level implementation strategy.
- Utilization of the GOALS provider-level implementation strategy was associated with increased provider adoption of HIV prevention EBIs, including increased offers of HIV testing, STI testing and PrEP.
- Further research is needed into determinants of variability across programs, and into the impact of provider-level EBI adoption on patient-level uptake and outcomes.
