

19th International
Conference on
**HIV TREATMENT
AND PREVENTION
ADHERENCE**

Continuum 2024 • June 9-11, 2024 • Puerto Rico

Community-Centred Health

Scaling Up Grassroots Innovation and Building Ecosystems

Karina Maldonado-Mariscal
TU Dortmund University, Germany
Department of Social Sciences

concepts that have been mentioned in this conference so far:

- Community centred-station
- Community monitoring advisory boards
- Participatory approaches
- Multi-sector engagement
- Engagement/ re-engagement

Content

1. Social Innovation and community-led innovation

2. Grassroots Innovation (GI)

3. Grassroots Innovation in Health

4. Co-creation and scaling up processes in Health

5. Building (Social) Innovation Ecosystems

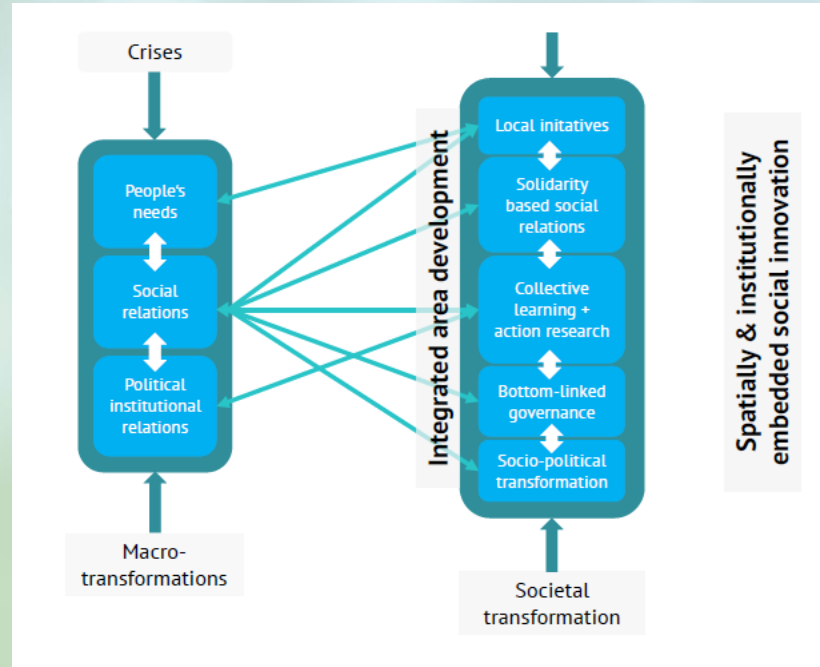

1. Understanding Social Innovation

- It is "**a new combination** or [...] configuration of **social practices** in certain areas of action or social contexts"
- It is "**prompted by certain actors**"
- It is aimed at "**better satisfying or answering needs and problems than before**"
- It "is [...] social to the extent that it [...] is **socially accepted and diffused widely**"
- It is "transformed depending on circumstances and **ultimately institutionalised as new social practice** or made routine"

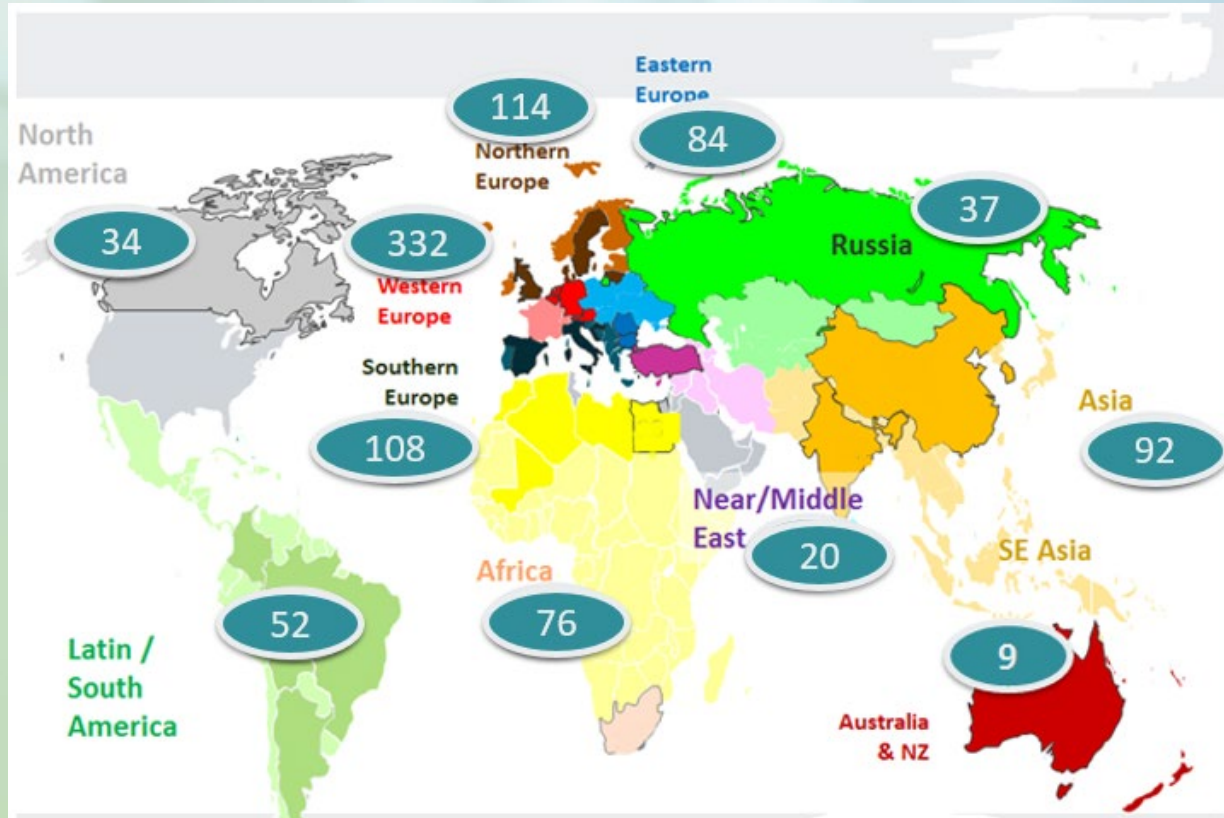

Embedded social innovation (space and institutions)

Local
context
matters

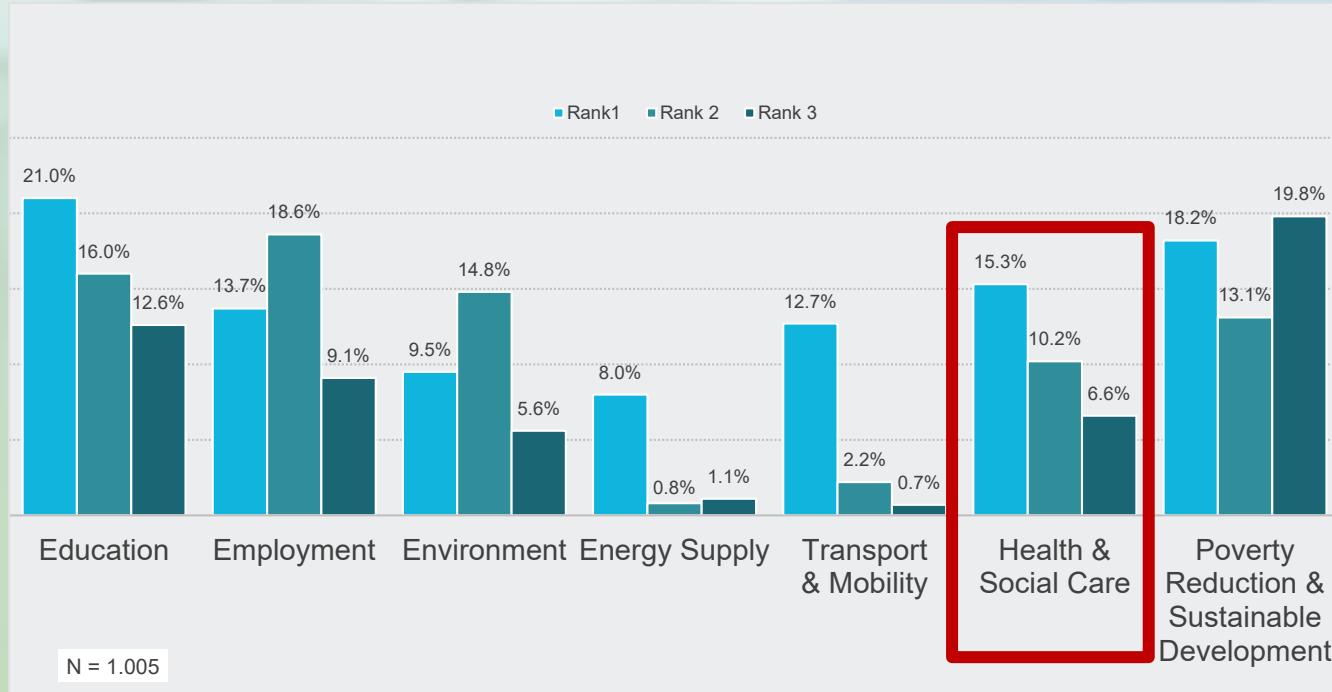

Mapping Social Innovations in the World: A European Project

A total of 1,005 cases

Policy areas addressed

1. Social Innovation and community-led innovation

- Community centred-station
- Community monitoring advisory boards
- Participatory approaches
- Multi-sector engagement
- Engagement/ re-engagement

Social innovation

Grassroots innovation

Innovation policies

2. Grassroots Innovation

- **offers practical insights into understanding innovation through the lenses of grassroots and community-based social change**
- Grassroots innovation is related to:
Public spaces, agency, poverty and inequality reduction, bottom-up solutions, collective actions
- We understand GI as:
“networks of activists and organisations generating novel bottom-up solutions for sustainable development; solutions that respond to the local situation and the interests and values of the communities involved” (Seyfang and Smith, 2007: 585).

More research on GI is needed:

Healthcare is not one of the main areas of Grassroots Innovations research...yet

➔ We need to change the paradigm of innovation in healthcare

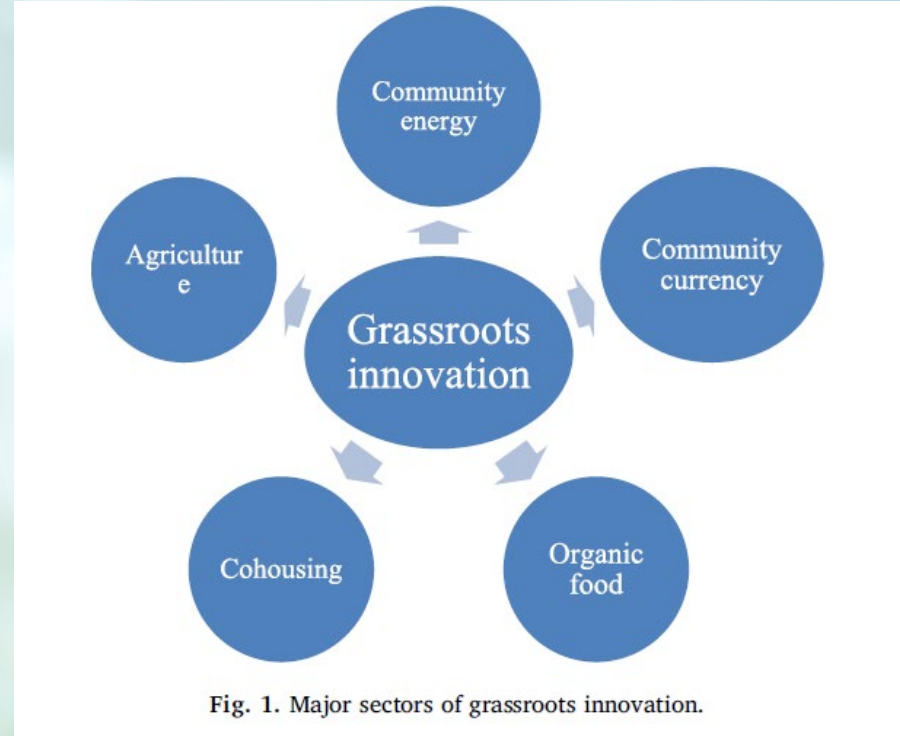

Fig. 1. Major sectors of grassroots innovation.

Nurturing Grassroots Innovations: Community Leadership is key

*Community Dialogue Day, Kenya
(Univ. Kansas)*

- Community leaders **are often informal, non-elected leaders**
- Community **can meet their members' needs** (reinforcement), while shared emotional **connection is built through shared places and experiences**, such as joint history and time spent together
- **Community leadership is usually non-hierarchical** and often based in **voluntary action**

Key asset: Nurturing motivation, recognition, resilience, voluntary work

3. Grassroots Innovation in Health

Developing a collective intelligence is relevant. Why?

- **Growing evidence, skills and connections**
- **Citizen science** to gather new data for early detection or monitoring of public health threats
- **Citizen-generated data** for monitoring the implementation of policy and programs
- **Crowdmapping** for community response
- **Mobilise power and money**
 - governments, organisations and communities become skilled at mobilising intelligence of all kinds (data, information and ideas - from, and with, communities).
- **Combining** web scraped and/or existing **datasets** for real-time surveillance of public health threats

What is Citizen Science?

Citizen science is looking for:

- democratising science
- helping interested communities to create data
- influence policy
- A way to promote political decision-making processes

Sources of images: *Citizen Science Association*

3. Grassroots Innovation in Health

image credit: Getty, O'Neill, 2021

Australia

- A national view of AIDS policies started more fundamental 'grassroots' level
- Australia's success have been built on **national initiatives and institutions** that are integral to the way AIDS is now viewed.
- **Grassroots and informal activities were critical** to Australia's early and effective response to AIDS and included:
 - **community mobilisation** (e.g. AIDS Action Committee)
 - the **timely intervention of frontline clinical services, alerted by early press reports**
 - **community activism** (e.g. education safe sex material for communities)

(Plummer and Irwin, 2006)

3. Grassroots Innovation in Health

Brazil

- **Social mobilisation and relationships with the state** for the AIDS movement in Brazil
- **Inclusion of AIDS policy in civil society activism** as well as the support in policy advocacy
- Federative coalitions = **alliances in policy development** contributed to more institutionalised advocacy
- **Federative coalitions** as the **process of employing new grassroots organisations** and engage them to incentivize organisations and **build a new structure for a national AIDS movement**

Slogan: Communities leading

NGO: 'Communities Leading'

(Maldonado-Mariscal, 2022)

3. Grassroots Innovation in Health

Brazil: instruments

- introduction of instruments and institutions that facilitated civil activist engagement (decentralisation efforts)
- commitment of international institutions to protect the well-institutionalised national AIDS programme
- national law (Sarney's Law) in 1996 that ensured universal access to AIDS treatment

3. Grassroots Innovation in Health

Brazil

- **Innovation:**
 - national bureaucrats who activated **grassroots mobilisation in new regions** what led to a decentralisation of AIDS policy
 - The **figure of community health workers** is in Brazil **very important**
 - **Bottom-up effort** to build a national movement

(Maldonado-Mariscal, 2022; Rich, 2019)

3. Grassroots Innovation in AIDS Policy

Brazil's stakeholders

Grassroots expertise

These new bureaucrats support with resources and channels to create new grassroots organisations: **‘state-sponsored activism’**.

A Transition

Other examples:

India

- Health Parliaments (India)
 - Think tank on health
 - “Public health transformation dialogues”

(Health Parliament, New Delhi)

4. Co-creation processes in Health

What is co-creation?

Process: key tools/new methodologies for including society in policy development

To experiment with "new modes of interaction" (Eckhardt et al., 2021:3)

Practices: refer to the agreement between multiple stakeholders to achieve a common goal

How?

Example: Co-creation of a health education program in Rwanda (Dzinamarira et al. 2020)

Who?

Citizens (Men in Rwanda)

Public sector (education, health)

Universities (researchers)

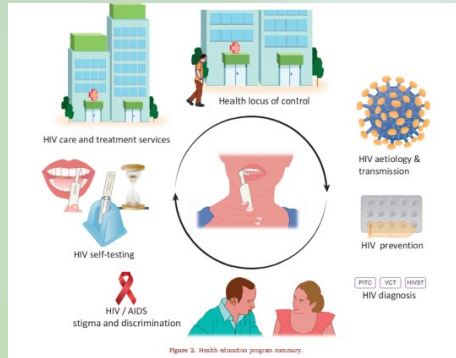

Figure 2. Health education program summary.

Scaling up: Environmental influences on scaling up

- Policy setting and political contexts
- Bureaucracy institutions
- Health sector organisation (service delivery, material resources etc.)
- Socio-economic and cultural context
- People's needs and rights

Figure 2. Environmental influences on scaling up

*Scaling-up initiatives can offer possibilities
for synergies with national health sector
reform processes*

(WHO, 2009)

4. Building (Social) Innovation Ecosystems

What is an ecosystem?

“a complex system of interaction between various stakeholders” (Eckhardt et al., 2021; Kumari et al., 2019; Jütting, 2020; Pel et al., 2020).

How to build it?

Facilitating spaces for (social) experimentation for community-health

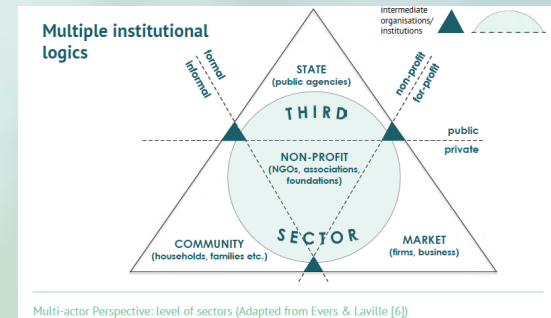

Who?

Bringing different stakeholders to the table (Howaldt and Schwarz, 2010).

5. Building (Social) Innovation Ecosystems

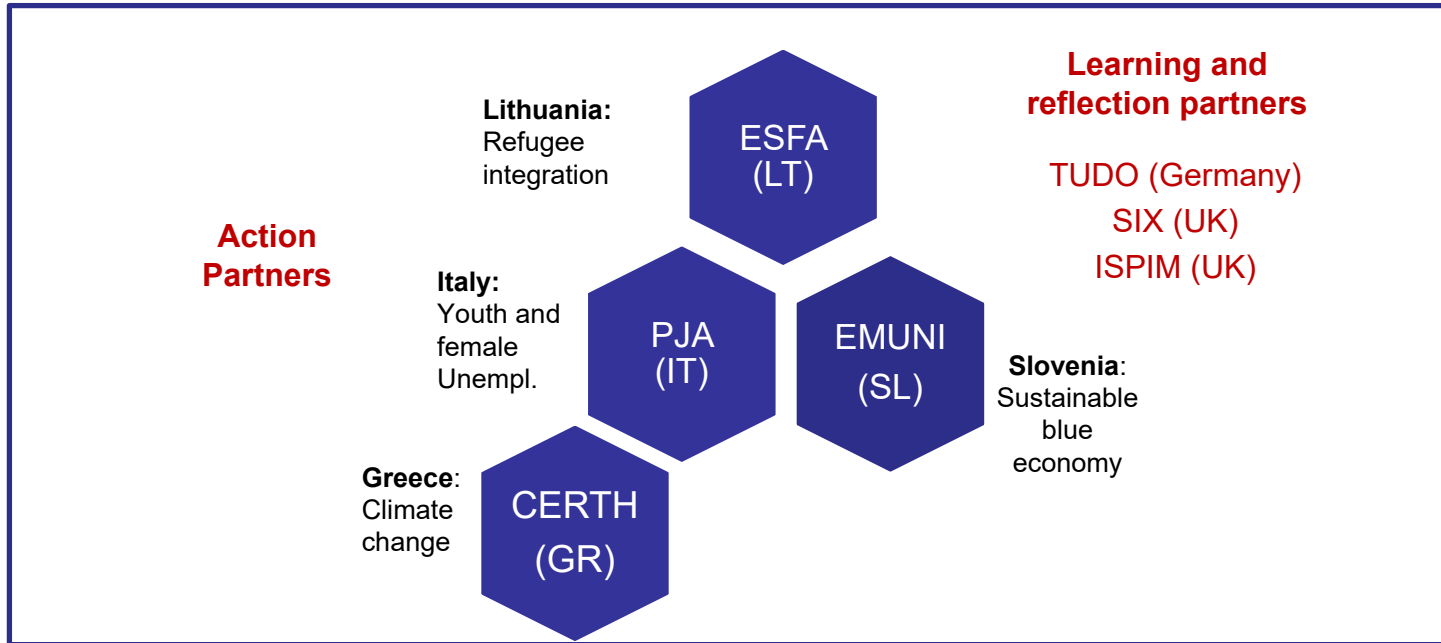

- There is a **need to develop social innovation ecosystems** in which all innovation **stakeholders create close links** for:
 - research
 - policies
 - fundraising
 - New social practices (Howaldt and Schwarz, 2010).
- **Multi-actor perspective / multi-stakeholder engagement**

(Avelino and Wittmayer, 2018)

Building social innovation ecosystems: CHES Project

An example

Project Number: 101096524 – CHES - HORIZON-EIE-2022-CONNECT-01

Project Duration: January 2023 - January 2025

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or European Innovation Council and SMEs Executive Agency (EISMEA). Neither the European Union nor the granting authority can be held responsible for them.

Summary

- We need to develop a holistic approach to healthcare that includes social and grassroots innovation for a country, a region or a community.
- Scaling up innovation is crucial for the sustainability of initiatives
- More research is needed on grassroots social innovation initiatives working for HIV prevention and care
-
- We need to understand the key actors in our environment, in order to:
 - Influence policies in HIV prevention, education, and care
 - Build skills and knowledge for later decision-making in health care
- Developing an ecosystem takes time and resources. But with an ecosystem approach we can:
 - identify current capacities and stakeholders
 - current and missing knowledge
 - develop capacities and make use of grassroots innovation in the local context

Thanks for your attention!
